

# Gradian Health Systems®

We believe medical equipment can be a catalyst for change in global health—but only if it's designed for the setting in which it's used and supported once it's there.

# Gradian Health Systems®

Gradian Health Systems is a nonprofit medical technology company that combines world-class devices with local training and customer service to unlock human potential for delivering care and improving lives in low-resource hospitals around the world. Our products are designed to thrive in any clinical setting, and our international distribution network ensures that our equipment is always working and its users can operate it confidently no matter what.

*Healthcare is only as good as the technology and skills used to deliver it. That's where we come in.*

## OUR MODEL

Gradian's operations are guided by a nonprofit mission and rooted in an industry approach to distributing and sustaining medical equipment.

**Technology:** We manufacture and distribute medical equipment that is designed to be effective in any health facility—whether it's a small rural health center or a high-end teaching hospital.

**Training:** We have teams of clinicians and technicians in each market to provide on-site product training for all new users. We also partner with local institutions for broader capacity building courses.

**Customer Support:** We've established regional service hubs and spare parts depots for certified Gradian technicians to provide annual maintenance, repairs, and ongoing customer support in each market.

**Advocacy:** We team up with other members of the global health community to advocate for policies that improve access to and quality of surgery, anesthesia, and critical care for all patients.

## OUR PRODUCTS

**Gradian's technology is built to overcome unreliable infrastructure and empower health providers to offer safe, high-quality care.**

### GRADIAN CCV

The Gradian CCV provides ventilation for critically-ill patients in post-operative recovery and intensive care environments. It offers volume, pressure, and CPAP ventilation modes for both adults and children, and comes standard with a 21-hour battery backup. The Gradian CCV can be used with any source of compressed oxygen, an oxygen concentrator, or room air, and has an in-built compressor that eliminates the need for medical air. Both CE- and FDA-certified, the Gradian CCV features an easy-to-use, durable design and low cost of ownership that make it an ideal device for any hospital.

### UNIVERSAL ANAESTHESIA MACHINE®

The Universal Anaesthesia Machine (UAM) is a complete general anesthesia workstation designed to function with or without electricity and medical oxygen—the first CE-certified machine of its kind. Built to withstand elements such as dust, heat, and humidity, the UAM features an integrated oxygen concentrator, automatic and manual ventilation options, and patient and oxygen monitors on battery backup. If power fails and external oxygen is not available, the UAM will seamlessly convert to draw-over mode to deliver anesthesia—preventing surgical cases from being interrupted, postponed, or referred.

**All Gradian products come with a best-in-class after-sales warranty that minimizes downtime and maximizes the sustained use of our devices.**
